

# BLOCKCHAIN TUTORIAL 26

## Bitcoin Transaction

# BITCOIN TRANSACTION

- To demonstrate a simple Bitcoin transaction executed on the Bitcoin testnet, we need:
  1. A sender private and public address.
  2. Claim some testnet coins from a faucet which will be transferred to our sender public address.
  3. A receiver public address.
  4. Transfer all testnet coins from the sender address to the receiver address.

# BITCOIN TRANSACTION

Balance:  
3.69948473 BTC

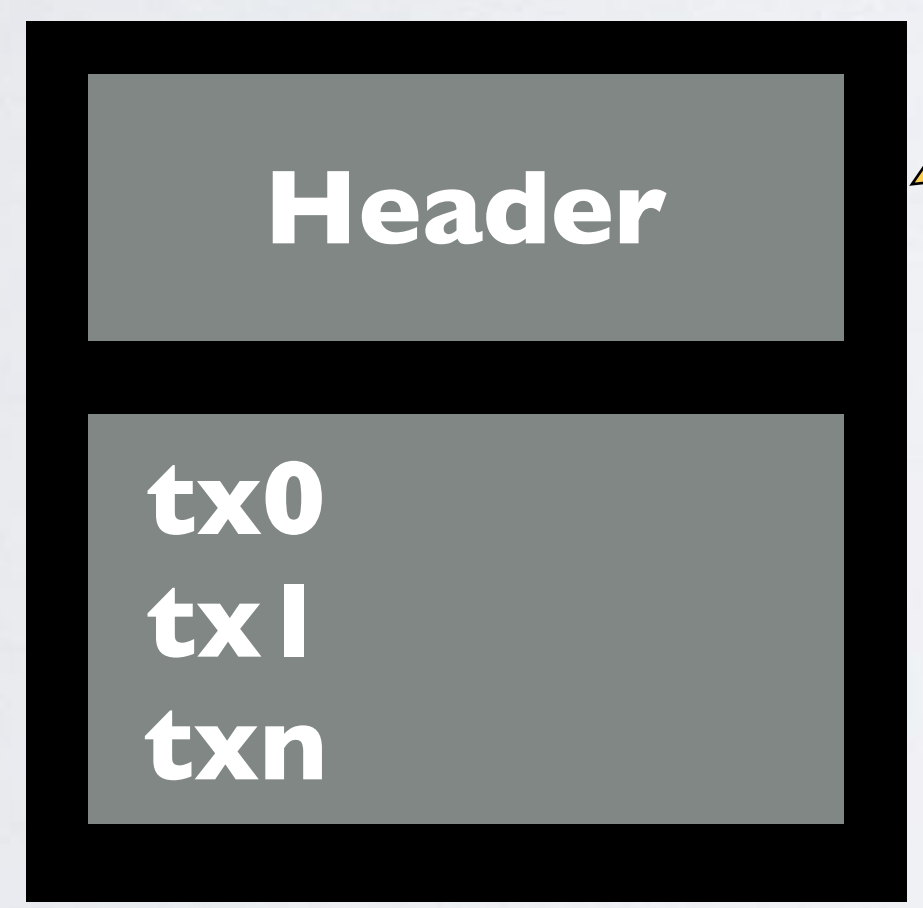

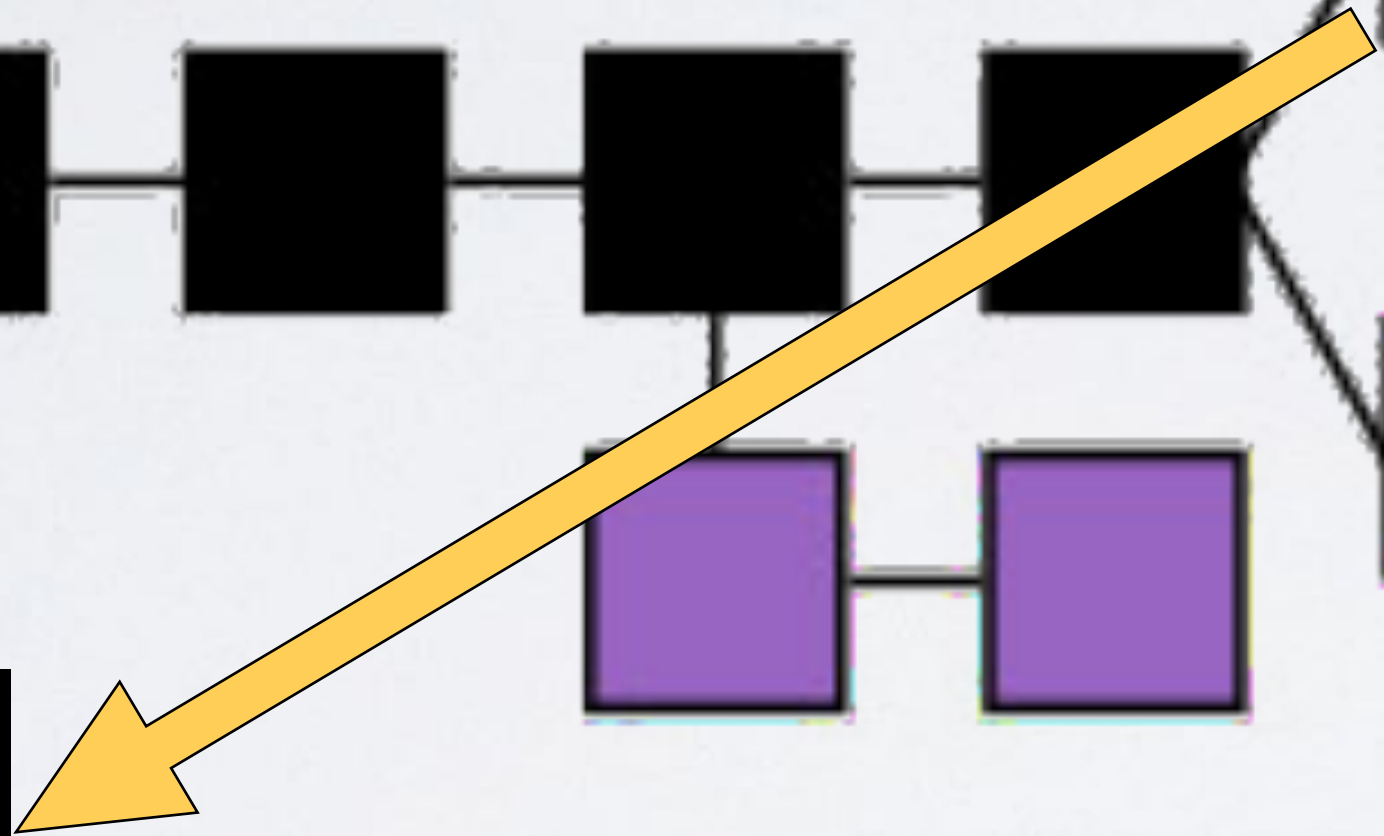

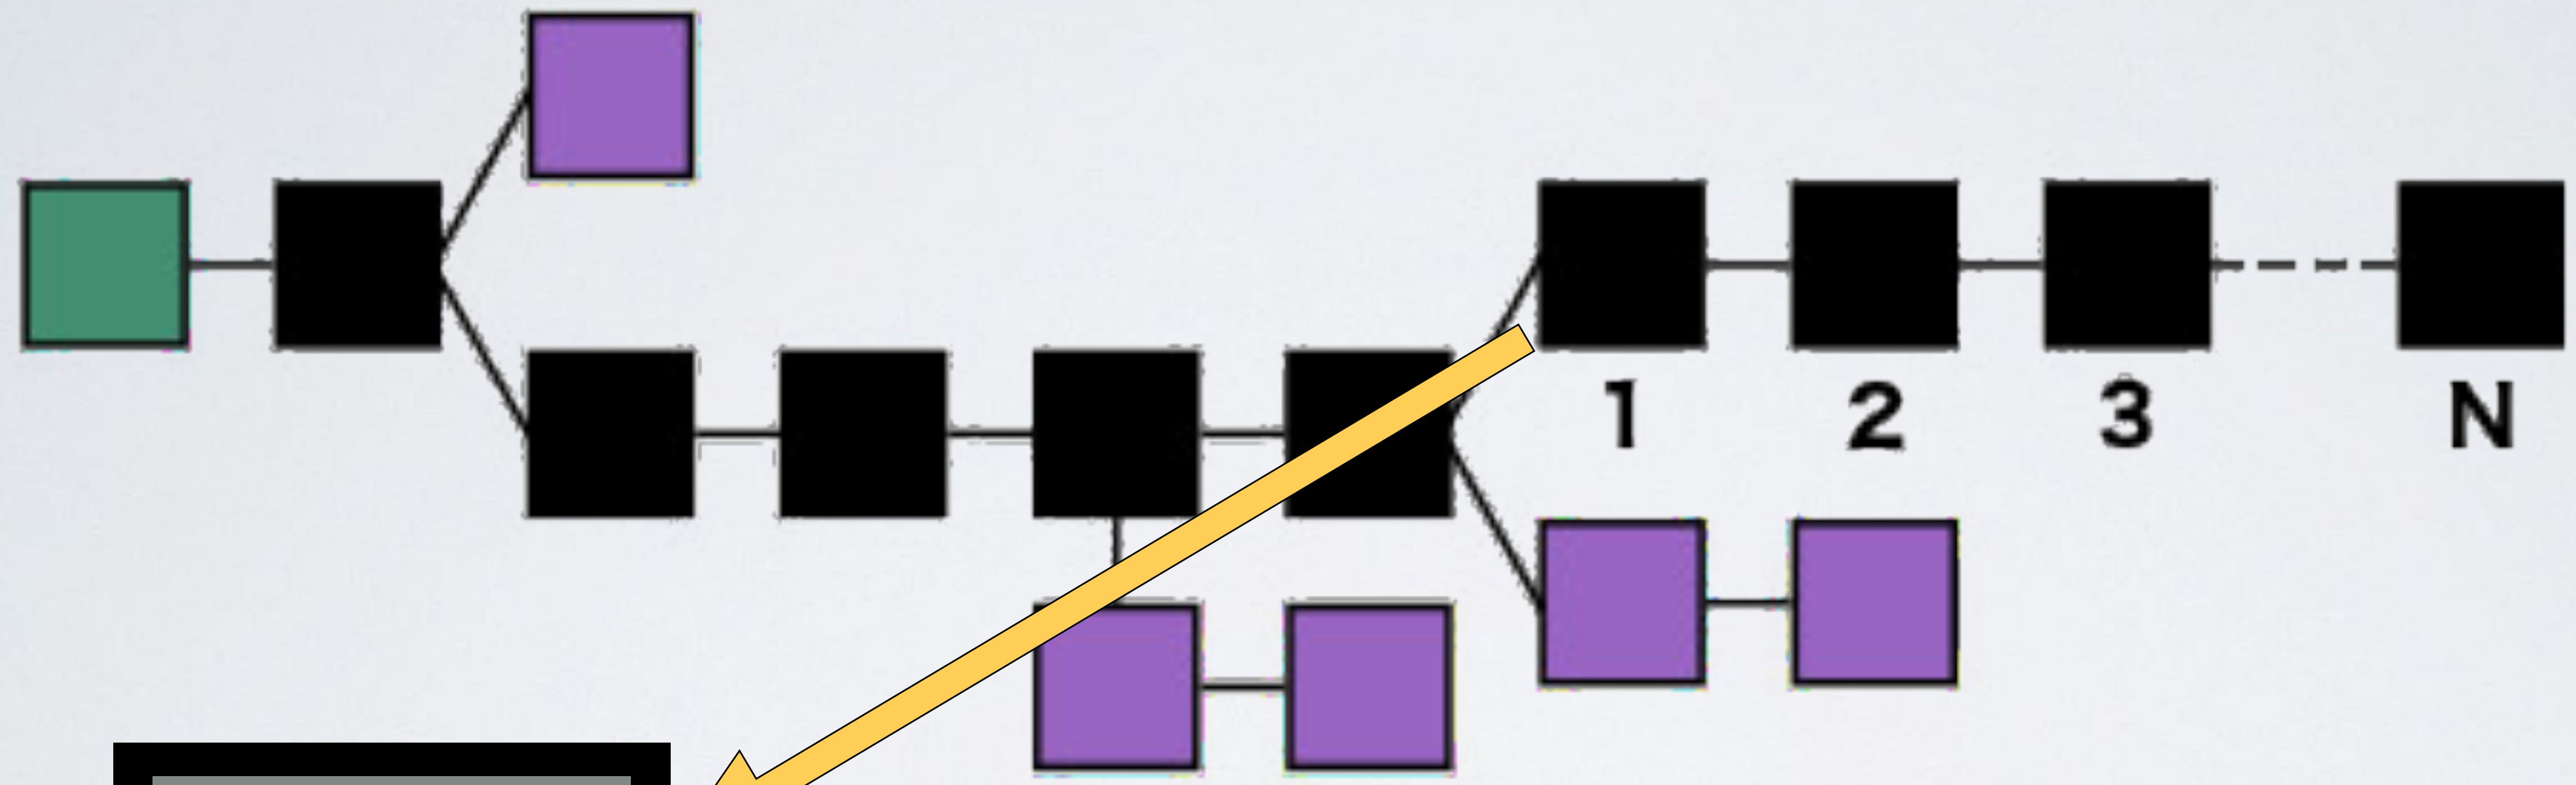

Balance:  
3.69938473 BTC

Fee:  
0.0001 BTC

# CONFIRMATION

# UTXO

- UTXO = Unspent Transaction Output
- An Unspent Transaction Output can be spent as an input in a new transaction.
