## IOTA TUTORIAL 2

## Trit \& Tryte

 1
$-1$

## TRINARY NUMERAL SYSTEM

- The trinary numeral system has two types:

The balanced trinary system in which a trit has the values $-1,0$ and $I$. The unbalanced trinary system in which a trit has the values 0,1 and 2.

- In this presentation I will only focus on the balanced trinary system.
- Trit means Trinary Digit, analogous to bit and has the following values: - I, 0 and I.
- Tryte means Trinary Byte, analogous to byte.

A tryte consists of 3 trits.

## TRINARY NUMERAL SYSTEM

- 1 byte $=2 \wedge 8=256$ combinations
- 1 tryte $=3$ trits $=3^{\wedge} 3=27$ combinations
- 5 trits $=3^{\wedge} 5=243$ combinations
- 5 trits is NOT equal to I byte

## BALANCED TRINARY SYSTEM CALCULATION

- Convert tryte =I, I, $\mathbf{0}$ to integer:
$-\mathbf{I} \times 3^{0}+\mathbf{I} \times 3^{1}+\mathbf{0} \times 3^{2}=2$
- Convert tryte I, - I, I to integer:
$\mathbf{I} \times 3^{0}+\mathbf{- I} \times 31+\mathbf{I} \times 3^{2}=7$

## BALANCED TRINARY SYSTEM CALCULATION

-What is the maximum value a tryte can have (not the number of combinations)?

- Answer: 13
- If you thought $3^{3}-1=26$ you are thinking in the binary system.
- If you have 2 bits in a binary system, you have the following combinations:

```
00 = 0x21 + 0x20 = 0
01 = 0x21 + 1x20 = 1
10 = 1x21 + 0x20 = 2
11 = 1x21 + 1x20 = 3 Max value = 22 - 1
```

## BALANCED TRINARY SYSTEM CALCULATION

- If you have 2 trits in a balanced trinary system, you have the following combinations:

$$
\begin{array}{rlr}
0,0 & =0 \times 30+0 \times 3^{1}= & 0 \\
0,1=0 \times 30+1 \times 3^{1}= & 3 \\
0,-1=0 \times 30+-1 \times 3^{1}= & -3 \\
1,0=1 \times 30+0 \times 3^{1}= & 1 \\
1,1=1 \times 30+1 \times 3^{1}= & 4 \\
1,-1=1 \times 30+-1 \times 3^{1}= & -2 \\
-1,0 & =-1 \times 30+0 \times 3^{1}= & -1 \\
-1,1= & -1 \times 30+1 \times 3^{1}= & 2 \\
-1,-1= & -1 \times 30+-1 \times 3^{1}= & -4
\end{array}
$$

- The values in the trinary system are balanced around zero:
$-4,-3,-2,-1,0,1,2,3,4 \operatorname{Max}$ value $=\left(3^{2}-1\right) / 2$

## BALANCED TRINARY SYSTEM CALCULATION

- A tryte has 3 trits, so the maximum value will be $\left(3^{3}-1\right) / 2=13$ and it has $3^{3}=27$ combinations.
- A tryte will have the following values:
$-13,-12, \ldots-2,-1,0,1,2, \ldots 12,13$
- Convert the following two trytes $\mathbf{- I},-\mathbf{I},-\mathbf{I}, \mathbf{I}, \mathbf{0}, \mathbf{0}$ to an integer:
$-\mathbf{I} \times 3^{0}+\mathbf{- I} \times 3^{1}+\mathbf{- I} \times 3^{2} \mathbf{+} \times 3^{3}+\mathbf{0} \times 3^{4}+\mathbf{0} \times 3^{5}$
$-13+27=14$

## IOTA TRYTE ALPHABET

- IOTA uses the balanced trinary system
- To make the trytes more human readable the IOTA development team created the tryte alphabet: 9ABCDEFGHIJKLMNOPQRSTUWWXYZ.
- The tryte alphabet consists of 26 letters of the latin alphabet plus the number 9 . The tryte alphabet has a total of 27 characters.
- Because I tryte has $3^{\wedge} 3=27$ combinations, each tryte can be represented by a character in the tryte alphabet.

## IOTA TRYTE ALPHABET

| Tryte | Dec | Char | Tryte | Dec | Char |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $0,0,0$ | 0 | 9 |  |  |  |
| $1,0,0$ | 1 | A | -1, -1, -1 | -13 | N |
| -1, 1, 0 | 2 | B | $0,-1,-1$ | -12 | 0 |
| $0,1,0$ | 3 | C | 1,-1,-1 | -11 | P |
| 1, 1, 0 | 4 | D | -1, 0,-1 | -10 | Q |
| -1,-1, 1 | 5 | E | $0,0,-1$ | -9 | R |
| $0,-1,1$ | 6 | F | 1, 0,-1 | -8 | S |
| $1,-1,1$ | 7 | G | -1, 1, -1 | -7 | T |
| $-1,0,1$ | 8 | H | $0,1,-1$ | -6 | U |
| $0,0,1$ | 9 | I | 1, 1,-1 | -5 | V |
| 1, 0, 1 | 10 | J | $-1,-1,0$ | -4 | W |
| -1, 1, 1 | 11 | K | $0,-1,0$ | -3 | X |
| $0,1,1$ | 12 | L | 1,-1, 0 | -2 | Y |
| $1,1,1$ | 13 | M | $-1,0,0$ | -1 | Z |

## IOTA TRYTE ALPHABET

- IOTA seeds, addresses, hashes, etc are trytes which are represented by characters from the tryte alphabet.
- For example the integer 14 , converted into trytes: $=\mathbf{I},-\mathbf{I},-\boldsymbol{I}, \mathbf{I}, \mathbf{0}, \mathbf{0}$

Convert the trytes using the tryte alphabet:
$-1,-1,-1=N$
$1, \quad 0, \quad 0=A$
Thus integer 14 converted into trytes: NA

- The word "Zoo" converted into trytes looks like: ICCDCD The ASCII value of $Z=90$, converted to trytes: $\mathbf{0 , 0 , 1 , 0 , \mathbf { I } , \mathbf { 0 } = \mathbf { I C }}$ The ASCll value of $o=\|| |$, converted to trytes: $\mathbf{0}, \mathbf{I}, \mathbf{0}, \mathbf{I}, \mathbf{I}, \mathbf{0}=\mathbf{C D}$

## IOTA SEED

- An IOTA seed contains 81 characters which is the same as 81 trytes.
- For example:

C9RQFODNSAEOZVZKEYNVZDHYUJSA9QQRCUJVBJD9KHAKPTAKZSNNKLJHE FFVK9AWVDAUJRYYKHGWQIAWF

- Each tryte has 27 combinations, which means an IOTA seed has: $2781=\sim 8.71 \times 10^{115}$ combinations
- In comparison a Bitcoin random number has: $2256=\sim 1.15 \times 10^{77}$ combinations
